Re: Response To Correspondence Of June 6, 2007  
Re: Patent Application Number 10/709,878

Dear Mr. Barlow:

Thank you for correspondence of June 6, 2007 (mailing date) regarding my patent application for the *Optimal Surface Mitigated Multiple Targeting System (OSMMTS)* with filing date June 2, 2004, Application Number 10/709,878. The information in this letter, along with the supporting documentation enclosed, will (hopefully) satisfy the USPTO patent requirements and editorial form that you have pointed out in your latest communication.

I have formatted two versions of the specifications, including claims, that

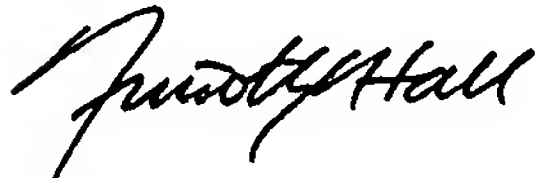

1. contain the marked up changes made in the July 19, 2006 version, and
2. a clean copy of the entire specifications with all markup text removed.

Please accept the enclosed Remarks Page as my official statement that the specification found herein includes no new material than that found in the July 19, 2006 version.

I have also edited the exact text of the claims found in the July 19, 2006 version to conform to the proper format, e.g., no use of multiple periods, etc.

Thank you again for your attention and help. I look forward to your approval of the OSMMTS patent application.

Sincerely,

Timothy Hall
